

Check'In Pro 2 Alarm Box

Deter and notify in real-time of any intrusion in your vacant ground floor premises!

What is Check'In Pro?

Check'In Pro is an autonomous all-in-one alarm box, specifically designed to easily and effectively secure ground floor premises and spaces. It connects to LTE-M and NB-IoT mobile networks.

Like Check'In, Check'In Pro does not need to be activated or deactivated; it continuously monitors the activity of the door it is placed on in real-time. Its embedded AI algorithm can distinguish normal events (opening, closing...) from intrusion attempts.

Check'In Pro is presented as a classic Check'In device with an added wide-field motion detector.

How It works

Check'In Pro continuously analyzes various physical data from the door it is attached to (acceleration, angular velocity, magnetic field), allowing it to determine in real-time the nature of the ongoing event at the door.

Its embedded AI algorithm was developed by collecting over a million raw data points from hundreds of different doors, as well as real intrusion data collected from intrusion experts.

Motion detection is conditioned by the detection of unlocking and opening of the door.

Alerts are, for example, sent if motion is detected while the door has been locked from the outside.

Check'In Pro can also work in combination with a Bluetooth access badge, which, if present, modifies the alert's severity.

In case of alert

- Check'In Pro detects any intrusion attempt within seconds, regardless of the method used (picking, door strikes, lock attacks...).
- An audio message sounds: "Attention, this site is secured, the siren will sound in a few seconds" (configurable).
- After the message is played, the microphone records a 15-second audio clip, then the siren sounds for 3 minutes (configurable).
- Simultaneously, the individuals in your alert scheme receive a push notification on their smartphone, as well as an SMS.
- The alert screen on the mobile app allows you to turn off the siren.

Compatible doors

The Check'In Pro box is compatible with a wide variety of doors:

Single swing doors

Sitex security doors

Garage doors

Modular spaces

Check'In continuously monitors actions performed on any infrastructure and alerts in real-time in case of a problem.

Our experts analyze and protect all types of structures: modular spaces, containers, street technical cabinets, transformer stations, goods transport...

Technical specifications

- Sensors: Accelerometer, gyroscope, magnetometer
- Motion detector (PIR): 130° field of view, 6 m range
- Microphone: For audio verification
- Connectivity: LTE-M, NB-IoT, and BLE (Bluetooth Low Energy)
- Power supply: 2 x 3V batteries ref LM17500
- Battery life: 2 years
- Integrated siren: 85 dB
- Dimensions: 140 x 72 x 31 mm
- Weight: 200 g with batteries

Software updates

Check'In Pro regularly updates itself via its LTE-M/NB-IoT cellular connection automatically.

It is also possible to update Check'In Pro via Bluetooth using mobile applications.
